Note: Turnout is based upon all votes for President in each year. Inconsistencies exist in 1992 in the entry of votes for minor party candidates. Therefore, at the county level, gains will be somewhat overstated and losses will be understated by approximately .5 to 2% due to this.

1. Data formatted by Polidata from data collected from state authorities. Each line represents a county equivalent in the top or bottom ranks for all units in the state.
2. SEQ is the reference line number for the table, CY is the FIPS County Code. (Refer to the County Detail tables, infra., for votes for Perot and all Others.)
3. The middle four columns of each subtable will vary by table. The five most right hand columns display the same variables for each table, though the data will change with the unit listed.
4. Right hand columns: R% is Dole'96; D% is Clinton'96; I% is Perot'96. Uppercase in W column indicates a Win over 50%, lowercase under 50%.
5. MARGINS are the numerical comparison between the candidate with the highest number of votes and the next highest. See the W(in) column for the winner of the county unit.
